

## **1. What information are needed to be featured in a school website that will cater for the needs of LCCV?**

The researcher will need to know what systems are currently in place. An interview might be in place in order to analyze which parts of the systems in place can be modernized or digitize to create a more efficient process for the school and its administration.

## **2. What difficulties does LCCV encounter that will be solved by the proposed LCCV School Website Management System?**

The proposed website will be another way to disseminate information. It can also accommodate downloadable forms for admissions and other related to student and faculty activities.

## **3. What features should be shown by the proposed system to solve the difficulties of stakeholders?**

Features that will be shown in the website will include:

- Downloadable forms for admissions
- Ability to view grades online
- Update the homepage for more recent announcements
- Display courses offered by the school
- Show upcoming events and activities

## **4. What benefits will be given be given by the proposed school website management system to stakeholders?**

One benefit of the proposed website is the streamlining of traditional systems in place at the institution. Another thing the website will provide is an indirect backup of the files that the school creates for the students and faculty. It will also reduce paper trail in the office or in the school.

#### **5. Is there significant difference between the proposed system and the old system?**

There will be a significant difference between the proposed system and the old system. Announcements are currently posted in Facebook. But through the website, text blasts can be sent to concerned parties. Distribution of information about course offers can be easily looked-up online since interested students first look up the school website.

In terms of:

- **Accessibility** – anyone can access the website and retrieve the information they need at any given time.
- **Productivity** – it frees up the employees by automating parts of their work and the staff can make use of the time freed by focusing on more important and work.
- **Efficiency** – it takes less time for staff and faculty to accomplish repetitive tasks enabling them to put more attention on other things that can lead to a better experience for both students and faculty.
- **Portability** – the developed website can be accessed and taken anywhere since the application is hosted on the wider web.
- **Modernization** – the proposed website and web application makes the institution keep up with the ever changing times and opens up more possibilities for other programs to cater to aspiring students and interested parties.
